Digital Empowerment Project

Week 2
Modules + WYSIWYG editor

November 4, 2018

Retrospective

This week

Demo

<https://digital-empowerment.herokuapp.com/modules>

Quill.js

We're using the react implementation: **react-quill**

Weekly goals

Checklist

- I can add module contents (explanation, exercise, evaluation)
- I can update module contents
- When I click a module, its contents are shown
- Only one module can be open at a time -> when I click a module a currently open module should close
- Adding and updating contents should be possible using a WYSISWYG editor (I used react-quill)
- WYSISWYG output should be styled correctly
- I can progress through module stages by clicking next
- I can mark a module as finished in the evaluation step, and the next module will open

Bonus:

- I can reorder modules by dragging them
- A loader is displayed while I wait for a network request to finish
- Errors are shown when network requests fail
- Errors are shown when the user supplies bad input

Standup
